CROSS COUNTRY GREENHOUSES - COTTAGE SERIES

CC 812 SG

The unique style of a Cape Cod greenhouse adds character to any landscape setting.

» New England architectural straight eave design with a steep 12/12 pitch (45 degree) roof slope » Sound design, masterfully engineered, the Cape Cod series is our high end model that has been featured in national magazines » Designed to accommodate additional hanging baskets and taller plants » The greater volume of air allows for less drastic temperature fluctuations within the greenhouse » Well suited to match homes and other buildings that feature a steep architectural roof slope » High quality structural design » Heavy duty aluminum frames (trusses for larger models) » Choice of white, green or brown baked enamel finish » Designed to accommodate accessories such as shelving and eye hooks to maximize space and light » Includes a pre-hung, heavy-duty storm door complete with locking latch and adjustable tempered glass window with screen » Option of removing one gable wall to attach to an existing house or building provides the benefit of a home-attached style greenhouse (easy access to services and home, improved energy efficiency)

CROSS COUNTRY GREENHOUSES

CAPE COD GLASS

- » Available in single and insulated double glass
- » All glass is tempered safety glass for your peace of mind
- » Tinting & other high performance glass options are available
- » Glass offers a clear and crisp appearance
- » Your choice of glass or polycarbonate roof
- » Cape Cod style glass greenhouses are often used as a conservatory, tea room or a small sitting area

BC Greenhouse Builders Ltd. offers a broad inventory of accessories to help you take total control of your greenhouse environment.

Call us today - we can help you find the right products for the results you want.

Marley Heater

220 VOLT - 4KW An efficient fan-forced electric heater for larger size greenhouses. Controlled with an adjustable automatic thermostat.

\$295.00

Caframo Heater

110 VOLT - 1500 WATT Total climate control with 3 heat and 2 fan settings. Automatic thermostat maintains a selected temperature. 5 year mfg's warranty. Ideal for smaller greenhouses.

\$85.00

Empire Heater

Warmth for a fraction of the cost of electric. Includes fan, blower & vent kit to mount through your greenhouse wall.

10,500 BTU **\$1140.00**
 17,500 BTU **\$1260.00**
 24,500 BTU **\$1340.00**

Minimum Maximum Thermometer

No more wondering how warm or cold the greenhouse temperatures were. Records the daytime high and the nighttime low temperatures.

\$20.00

Caframo Fan

Equalize the greenhouse temperature and distribute air evenly throughout. This quiet two-speed fan maintains constant air movement.

\$30.00

Thermostat

All weather heating/cooling thermostat, used with exhaust fans & motorized intake shutters, operates electrically on a 110-volt circuit outlet. Suggested temp setting at 30-32°C (80-90°F)

\$90.00

Vent Screens

Specially designed to work in conjunction with our vents and automatic openers.

Roof Vent: **\$135.00**

Side Vent or Intake Shutter Screen: **\$125.00**

Shade Cloth

Cool the interior of your greenhouse by using a 70% horticulture shade cloth

6' Wide **\$5ft.**

12' Wide **\$9ft.**

Side Vent

A 24" x 24" side vent provides added ventilation to any greenhouse.

Single Glass or Twinwall

Manual: **\$95.00**

Automatic: **\$170.00**

Double Glass or Fivewall

Manual: **\$175.00**

Automatic: **\$250.00**

Glass Louvres

A 24" x 28" aluminium frame with adjustable glass louvre blades. Louvres can easily be installed in any glass greenhouse.

\$190.00

Bayliss Solar Powered Vent Opener

Take the guesswork out of your greenhouse ventilation. This opener will operate your vent based on temperature.

Standard Opener: **\$75.00**

Super Opener for Double Glass: **\$195.00**

Wire Shelving

Increase the growing space inside the greenhouse by attaching a 12" wire shelf to the side walls.

- 8' long - \$75.00
- 10' long - \$85.00
- 12' long - \$95.00

Cedar Benches

Choose from two sizes of these heavy duty all cedar framed benches, with either a wire or cedar top

GLAZING MATERIALS & FOUNDATIONS

We offer four different glazing options from tempered single and tempered double glass to 6mm twinwall polycarbonate and 16mm fivewall polycarbonate. Our glazing options allow our clients to attain the best balance between insulating value, esthetics, and economy to suit their needs.

- » Our tempered single glass offers a traditional greenhouse look that appeals to purists and garden center customers, full light transmission for greenhouse gardeners that want the capability to control all growing variables, and the safety of tempered glass to minimize any possible breakage and eliminate the possibility of any serious injury in the event of a broken piece of glass.
- » Our tempered insulated double glass has all the benefits of single glass with an insulation factor optimized for full service use in cold climates.
- » Our twinwall polycarbonate glazing provides the benefits of 50% better insulation compared to single glass for reduced heating costs, light diffusion for built in shading and cooling as well as privacy, and a nearly unbreakable strength is ideal for schools or any high traffic situation. Along with the reduced heating costs compared to single glass, the light diffusion and insulation factor will keep the greenhouse from heating up too quickly in the morning and cooling down too quickly when the sun sets. This moderates the temperature for the plants resulting in the best possible growing environment.
- » Our fivewall polycarbonate glazing has all the benefits of the twinwall polycarbonate, while offering an insulation factor that is 80% more efficient than the twinwall polycarbonate and 50% more efficient than double glass.
- » Our glazing options can be intermixed in the same greenhouse to add extra insulation and light diffusion where it is needed while maintaining aesthetic appeal and optimal visual effect where desired.

FOUNDATION STYLES

- » When selecting a site for your foundation, a flat, level surface is essential so that the greenhouse can be easily installed, stable and secure. Locate your greenhouse close to power and water, while also considering water drainage and easy access. Try to locate the greenhouse so that 6 hours of sunlight is available during the winter months.
- » Whatever your choice of material for the foundation, the base must be level and square, and built to the exact outside dimensions of the greenhouse. (A foundation sketch will be provided.)
- » If you will be having a raised foundation, lowering the door to ground level is a free option. This is called a door drop. The opening to leave for the door will be noted on your sketch and this dimension must be confirmed upon order.
- » The most economical foundation is a row or two of 4 x 4 timbers (or 6 x 6's for larger greenhouses). If possible, concrete blocks or sona tubes in the corners will also help to keep the timbers from eroding. Other foundation options include a concrete slab or a raised concrete wall. The higher a founda-

tion is raised, the more head room becomes available inside the greenhouse for hanging baskets and tall plants. (The standard side wall height of all BC Greenhouses is 5' 6".)

IMPORTANT NOTICE: If pressure treated timbers are used, a 10mm polyethylene barrier must be used between the wood and the aluminum.
